

AGENTIC QA COPILOT

Agentic QA Copilot

Evidence-backed test generation powered by
Graph RAG, Vector RAG, and AI agents

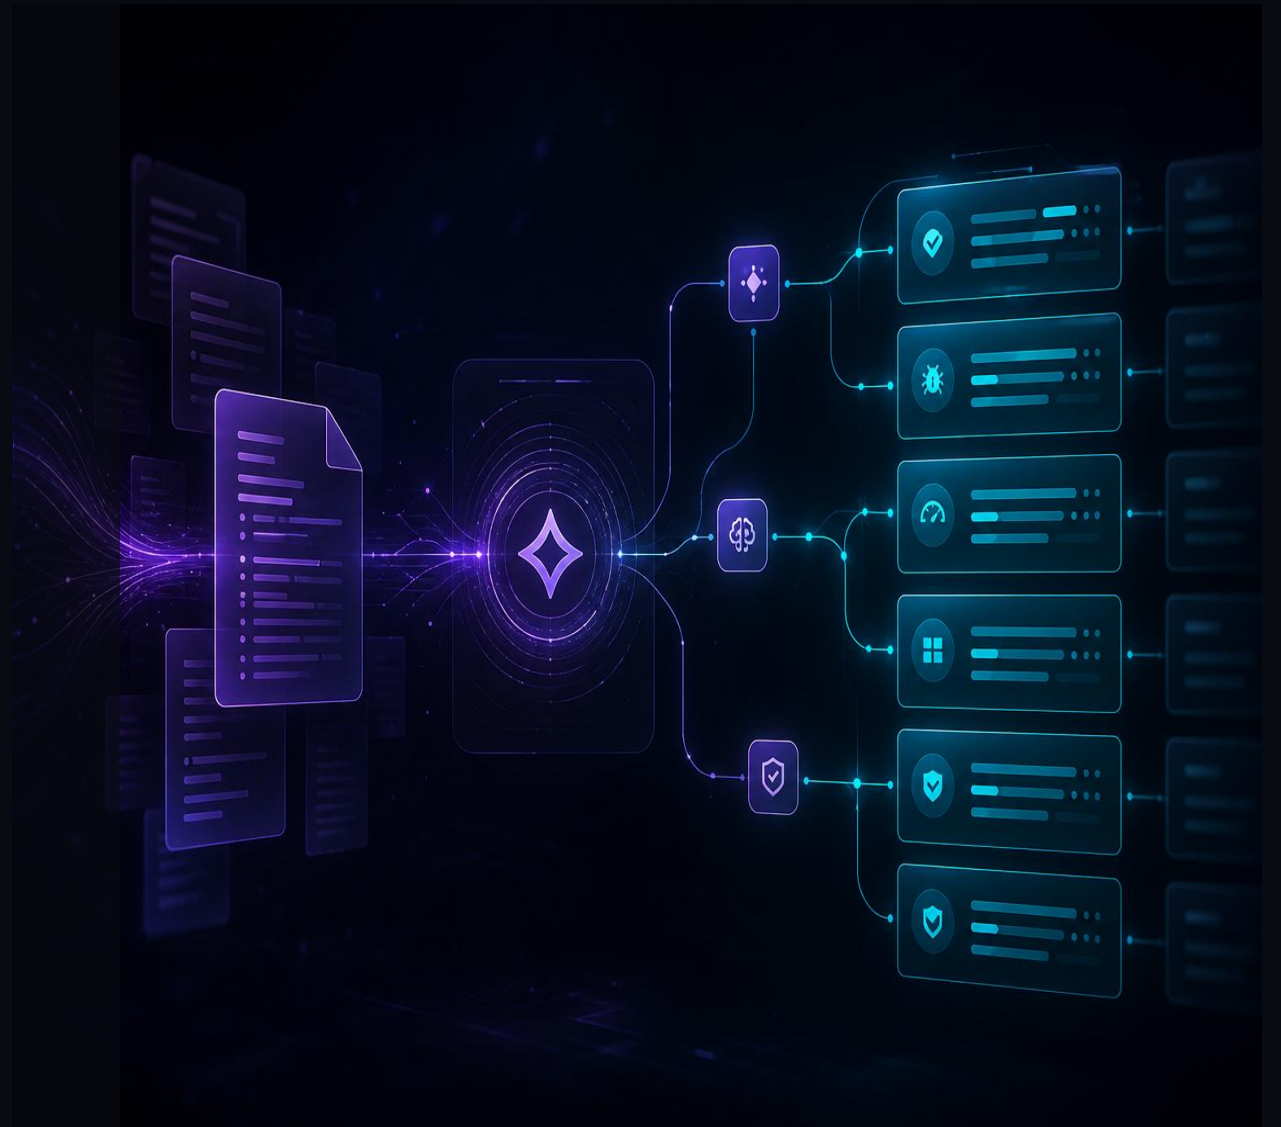

From software context to complete QA intelligence.

System Flow Graph

QA Knowledge

Agentic Test Generation

Coverage Closure

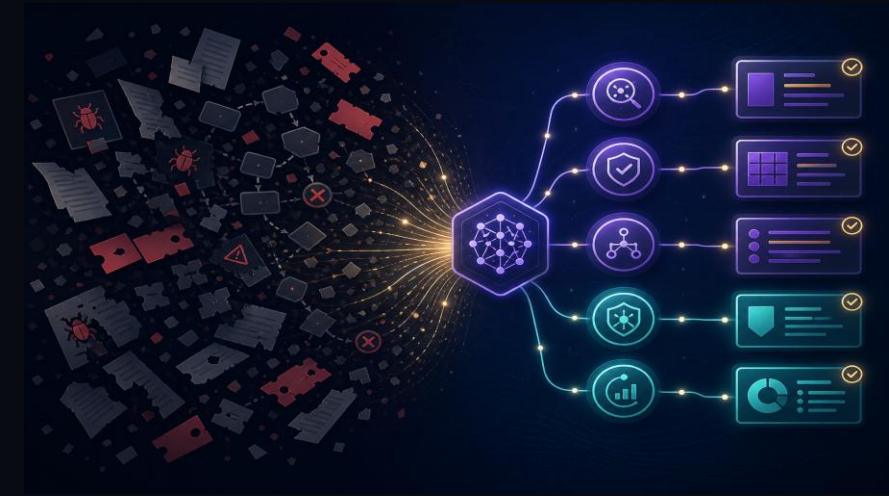

The QA Challenge

PROBLEM

Fragmented QA Reality

- Requirements scattered across tickets, docs, and tribal knowledge
- Generic AI produces generic test cases
- Coverage gaps are hard to detect manually
- Regression planning is slow and inconsistent

SOLUTION

Agentic QA Copilot combines:

- System Flow Graph
- Jira / Confluence / QA documents
- Graph RAG + Vector RAG
- Specialist QA agents
- Evidence-backed outputs

How the Copilot Works

Graph RAG

Understands user journeys, branches, dependencies, and failure paths.

Vector RAG

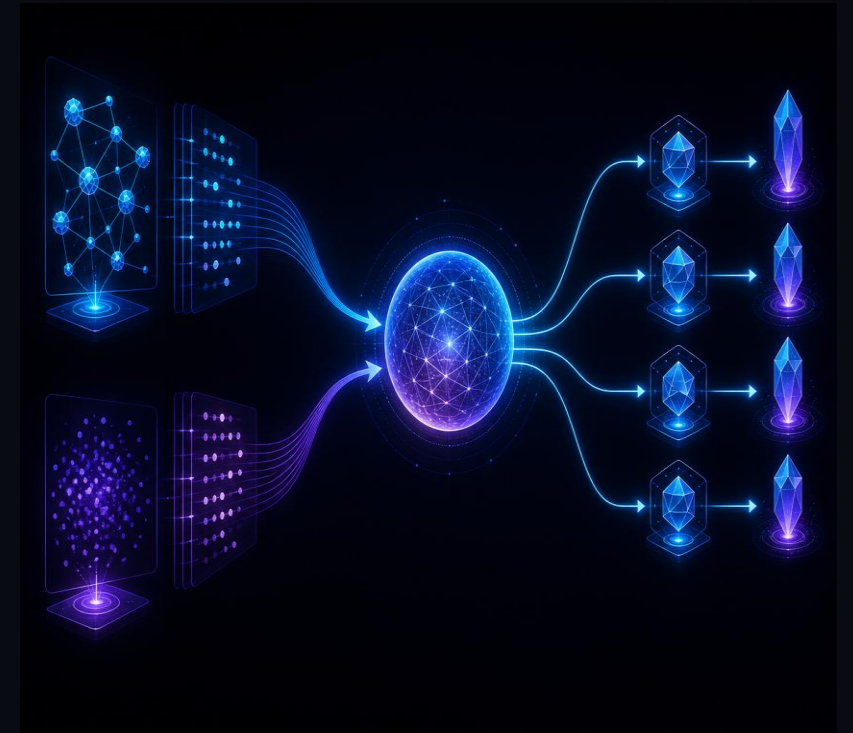

Retrieves relevant requirements, bugs, tickets, and documents.

Context Fusion

Combines graph structure + document evidence into one reliable prompt context.

Agents

Generate, review, improve, and explain QA artifacts.

Live Demo Journey

01

Create System Flow Graph

02

Inspect Graph Explorer

03

Import Knowledge

04

Run Agentic Analysis

05

Generate Test Cases / BDD

06

Review Validity & Automation

07

View Bugs, Regression,
Coverage

08

Export BDD Scenarios

INPUT

- Feature flow
- Requirements
- Bugs
- Tickets
- Docs

OUTPUT

- Test Cases
- BDD Scenarios
- Automation Review
- Bug Reports / Regression
- Coverage Gaps & Evidence

Future Scope

From QA assistant to continuous AI QA platform
